

Welsh Slate has been 500 million years in the making, so your sign will last a life-time and you will be proud of it for generations to come. It is a fantastic, beautiful, durable, natural product with natural variations in colour and markings and the presence, in some cases, of calcite veins and sometimes even a little bit of Welsh “Gold” – although it tends to be Iron Pyrite (Fools Gold) rather than actual gold!.

How to care for your plaque...

Our signs can be cleaned gently using a soft cloth and warm soapy water. The Slate will return to its full beauty with a very light application of linseed oil or vegetable oil on a soft cloth.
